Overture hexcode list statement

Our hex color codes are determined under standardized lighting conditions using an intelligent gloss meter and verified through visual comparison. Colors are captured consistently in controlled lighting (Testing Environment: Kelvin: 6500±500, Real-Time Color Temperature: 6602, Illumination: 1915 Lux).

While we strive for accuracy, color perception can vary due to individual monitors and display settings. Slight color variations may occur when viewed on different devices.

Use our hex codes as a reliable reference, but consider these variations for critical color decisions. For precise matching, we recommend a physical sample comparison.

If you have any questions, contact us at service@overture3d.com
